Fasteners for safety critical applications

Beck Prosper's Independent Laboratory Extends ISO 17025 Scope

Following hot on the heels of October's announcement more additional investment has been made in November to support our continued growth and improvement, enabling Beck Prosper to demonstrate further control of yet more processes internally in meeting the demands of API 20E and API 20F.

Our fully independent laboratory has been granted an extension by UKAS to the current ISO 17025 scope whereby both Magnetic Particle Inspection (MPI) and Dye Penetrant Inspection (DPI/ LPI) have been added to our schedule of accreditation.

We can now successfully perform these two non-destructive inspections on site, fully compliant with the stringent requirements of both API 20E and API 20F.

This addition of NDE to our scope now complements our existing ISO 17025 accredited independent test facility on site, where we have the ability to perform a full range of both mechanical and metallurgical tests.

Well done to the Beck Prosper team on achieving this extension and our customers can look forward to placing orders knowing that the testing regime on site is independent, robust, and ethical.

Please send your enquiries for high integrity and/ or API bolting to enquiries@beckprosper.com. We look forward to hearing from you.
